

Decryption activity (Group C)

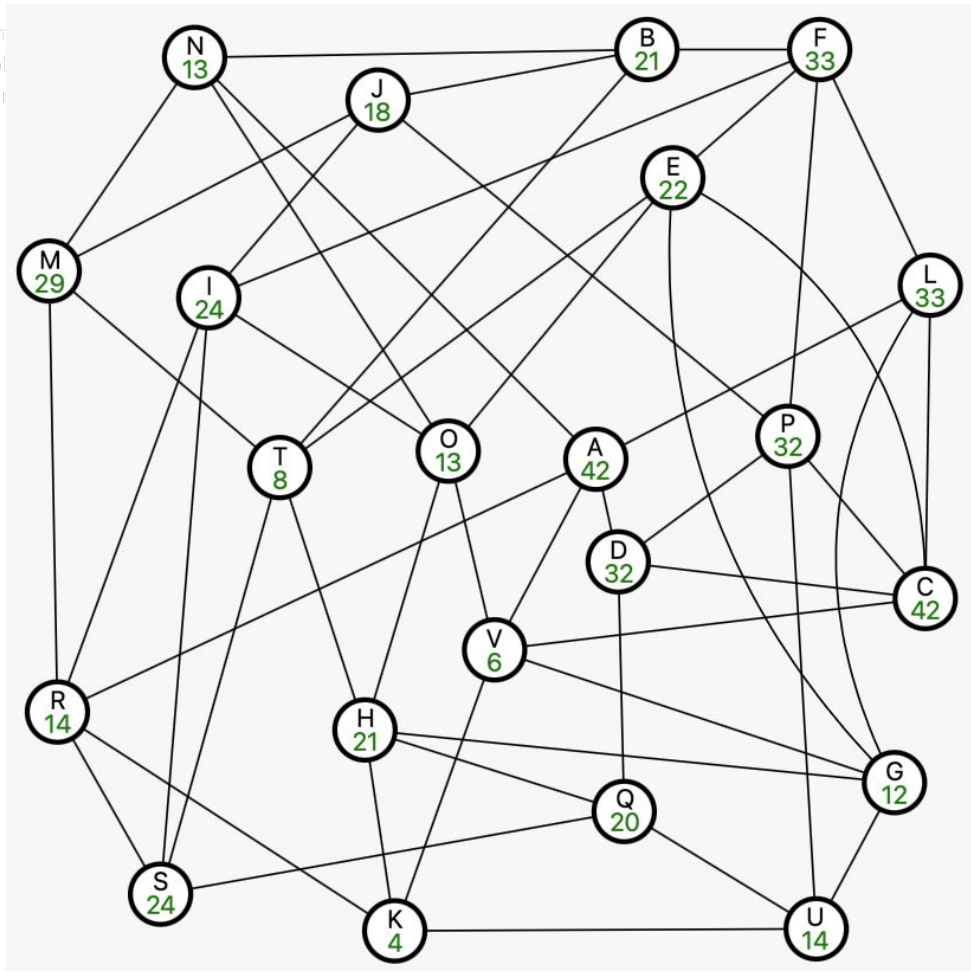

Cryptography module

A secret message (a number) has been encrypted with the encryption technique showed before.

Your task is to decrypt the secret message.

In the following, you will be given some information

- a secret message encrypted on a particular graph
- a link to verify if you decrypted the secret message correctly
- other material will be given to you during the activity

IDENTITIES

Verify your decryption

A secret message (a number) has been encrypted.

Go to the following link to verify if you found the plaintext message on the graph.

The number is the key to open this treasure chest.

The tool at the following link helps solve a linear system of equations.

Be patient the first time: load may take up to a minute.

Insert the equations, one per line, without commas or separators.
